

Aditya Chander

(650) 283-8142 | Boston, MA | adityachander@gmail.com | [Github](#) | [LinkedIn](#)

EXPERIENCE

Upstart: Remote from July 2025
Research Scientist

- Working on the Verifications team to identify fraudulent loan applications.

Eventellect: Remote June 2023–August 2023
Data Scientist

- Built novel price forecasting models in Python using Tensorflow/Keras (LSTMs) and lightgbm to predict NFL and US Open Tennis ticket price fluctuation from web-scraped Vegas odds and company's SQL database.
- Developed two interactive forecasting apps using my models powered by Datalore (JetBrains) for use by ticket strategy teams, resulting in speedups in pricing tickets for 2023 US Open and 30% higher ticket revenue.

Erdos Institute: Data Science September 2022–Present

- Project lead for prizewinning [podcast recommendation engine](#) (Streamlit app) built using podcast transcript embeddings extracted from MiniLM-L6-v2 language model. Project was ranked as the top project of 29.
- Mentored four successful data science projects that used deep learning to predict stock prices (x2), classify groovy rhythms and model hiring trends in the academic job market.

Inspirit AI: Remote (contract) May 2020–June 2022
Instructor and Curriculum Developer

- Taught hundreds of high schoolers with limited coding experience the fundamentals of machine learning (regression, classification, clustering, deep learning), mentoring them on structured ML projects.
- Developed part of the introduction to Python curriculum and the music recommendation project, which involved scraping data from the Spotify and Billboard API and using supervised learning methods (including RNNs on acoustic features of the songs) to generate predictions for which of 1,000 songs were hits.

Yale University: New Haven, CT September 2019–May 2025
Doctoral researcher and Teaching Fellow

- Dissertation: modelling real-time music listening using Bayesian inference models, metrics from NLP, and controlled A/B test-like behavioral experiments; [award-winning research](#) published in journal *Cognition*.
- Presented work at multiple national and international conferences in music and psychology; preparing an invited book chapter on my dissertation work for a forthcoming volume by Oxford University Press.
- Teaching Fellow for five classes from 2021–2023, including Natural Language Processing in Spring 2021, where I designed a brand new assignment on movie review sentiment analysis and prediction.

Stanford University: Stanford, CA September 2017–June 2019
Graduate researcher and Senior Section Leader

- Used principal component analysis to study expressive motion in violin performance and how it relates to musical structure, resulting in a conference presentation and a [publication](#) in the journal *Music Perception*.
- Senior Section Leader (teaching assistant) for CS106A, Stanford's famous introductory class in computer science. Taught five sections of 10–12 students, graded assignments and hosted office hours, and trained new section leader hires on best practices for teaching.

SKILLS

- Languages:** Python, R, MATLAB, SQL, JavaScript, bash/zsh
- Python Libraries:** numpy, pandas, matplotlib, seaborn, sklearn, statsmodels, scipy, keras, tensorflow, plotly, streamlit, lightgbm
- Tools:** Jupyter, Github, Datalore, Azure ML, MLFlow
- Soft skills:** Leadership, mentorship, project management, teamwork, discipline, flexibility

EDUCATION

Yale University, PhD, *Computational Music Theory and Music Cognition* September 2019–May 2025

Stanford University, MA, *Music, Science & Technology*. GPA: 4.12. September 2017–June 2019

University of Cambridge, BA, *Music*. Double First Class Honors with Distinction. October 2014–June 2017
